

**INTERSPIRO TRANSFORMS  
PROFESSIONAL DIVING  
INTRODUCING  
DIVATOR LITE**

# DIVATOR LITE CYLINDERS

**DOT APPROVED**

## Interspiro transforms professional diving - again

Interspiro is the search and rescue industry leader. We are now the first company in the world to launch Divator Lite – fully composite cylinders for professional diving. Fully composite cylinders are the highest level of performance in our constant endeavor to make life easier for professional divers.

## Diving takes place above surface

One of the main factors behind Divator Lite cylinders is the recognition that 90% of diving takes place above the surface. It's just as much about transporting, waiting and preparation as it is about being in the water. Interspiro's aim has always been to simplify and streamline the logistics of the entire diving process. But, more importantly, also to minimize strain on the diver's body – both before and during a dive. Back problems are familiar territory for divers, and fully composite cylinders represent an important step forward in ergonomics. Another driving force behind Divator Lite cylinders is the fact that a cylinder pack gives the diver enhanced balance and a reduced profile when diving. A reduced profile simplifies work in fast-flowing currents.

## Divator Lite cylinders – the easy choice

Interspiro takes the greatest care in its product development, and it's this attention to detail. We are safe in the knowledge that the products we launch not only meet all the relevant standards, but exceed them. For example, our product development require that we not only pressure test Divator Lite cylinders 12,000 times at 4410 psi as the standard specifies, but 200,000 times at 6615 psi. This ensures the best possible safety for the diver. Numerous armed forces already use Divator Lite cylinders, and several have been using fully composite cylinders since 1992. Thanks to the impressive response, we now want to make Divator Lite cylinders available to all professional divers, enabling them to make the easy choice: Divator Lite.
